

FAI 25th World Championships – 6 September 2024 PM

Discussion: Broad high pressure remains across central Europe. Light and variable surface winds are expected to become more consistent with time from the east-southeast and turning left in the lowest 2000 feet agl towards sunset. Winds veer (turn right) with height. The atmosphere is weakly unstable to the south, and there is a low chance of an isolated shower through the evening south (mainly in Serbia).
